iEMME

PACKAGING A MISURA DI BUSINESS. IL TUO.

Since 1935, a history of innovators.

From a vision of the founder was born the idea of replacing the old wooden crates with modern corrugated cardboard packaging.

And it is from here that our company was born, literally: I.M., which later became IEMME. The company has experienced a continuous and constant process of growth, which has led it to be today a solid and innovative reality in the corrugated cardboard sector, thanks to its production, logistics and service potential with an area of 60,000 square meters.

IEMME further expanded its size through a corporate integration with the VPK Group. This new collaboration with the international Belgian group fits perfectly into IEMME's long-term vision and strategy, which is geared towards sustainable growth, innovation and increasing consolidation in European and global markets. Thanks to this development, IEMME emerges with greater strength in the packaging sector, consolidating itself as an authoritative and recognised partner, capable of stimulating new business and commercial developments.

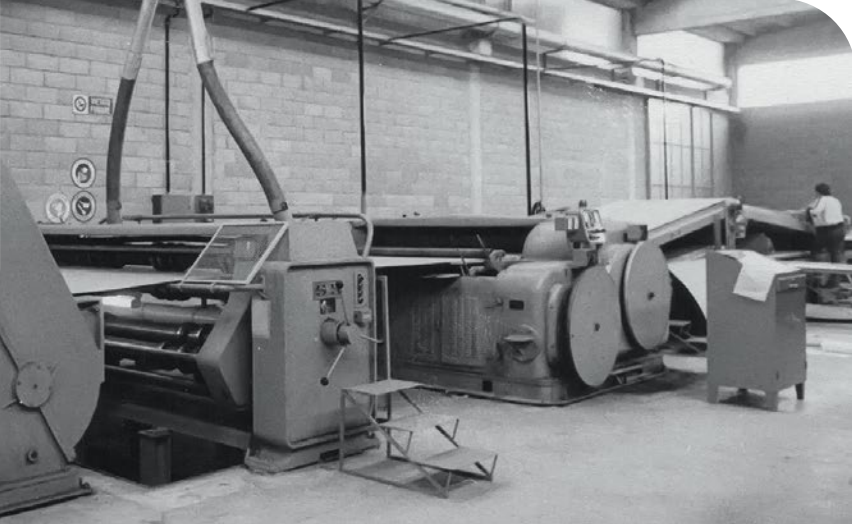

Protect your product with the most advanced corrugated packaging systems.

The well-protected and safe product becomes an economic advantage for your company.

IEMME designs quality packaging to customer specifications, can print your creativity and create functional shapes to optimize canning in automatic processes. Choose from a wide range of types of packaging able to satisfy, in a short time, small and large production needs.

Company year 1960

Sheets of corrugated cardboard

Standard packaging

Die cut packaging

Trunks for clothes

Pallet boxes

Sustainability becomes a strategic value.

In every area of the company and at every stage of productivity, being eco-sustainable becomes a fixed point to share.

High production capacity.

IEMME is one of the leading companies in the tertiary packaging sector with its high production capacity and a wide range of types of packaging able to satisfy, quickly, small and large productions.

The future is called research and development.

Today the company's vision is to focus on continuous innovation and diversification of the offer to create products that are always new, sustainable and suitable for market trends also for automatic canning production systems.

More efficient production processes.

IEMME is committed to achieving a balance of excellence between production costs and services. The automation of the processes allows to optimize production costs without losing quality.

Staff training.

IEMME promotes sustainability as a strategic value, training its employees on optimizing the use of raw materials and responsible saving of energy and water.

Recycling of raw materials.

Corrugated cardboard wins the challenge of eco-sustainability compared to the common products currently used for packaging, saving CO₂ emissions produced by disposal.

Use of renewable energy.

IEMME has always been attentive to sustainability, investing in research and renewable energy. Iemme uses energy produced by 2500 solar panels installed in its production site.

Safer with certified quality.

Research and continuous innovation allow us to create products with very high quality standards, because the market and end consumers require it. A quality packaging makes transport safer and guarantees the integrity of the product, contributing to the success of the order and the image of the supplier company.

The mark of responsible forestry

IEMME is certified for the following activities: production of corrugated cardboard, development, production and printing of corrugated cardboard packaging.

FSC® certified products available upon request

Satisfying customers gives satisfaction.

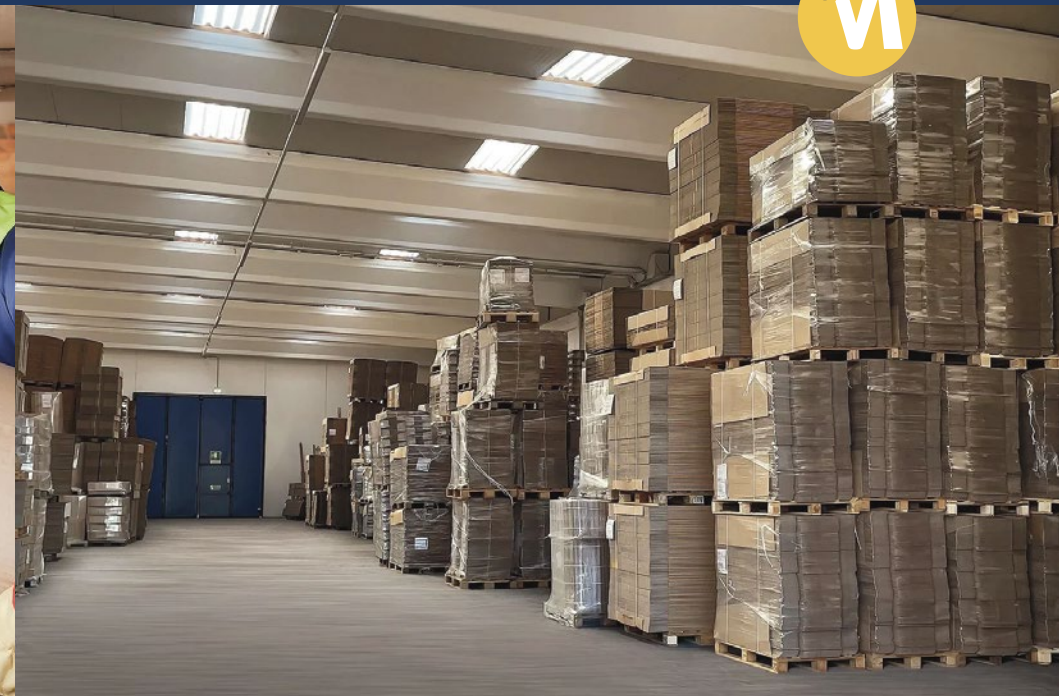

Each product requires its own packaging, which meets the needs of high quality, functionality, resistance and savings, which can only be guaranteed by directly following each phase of the order: from creation to its production and storage, up to delivery and warehouse services.

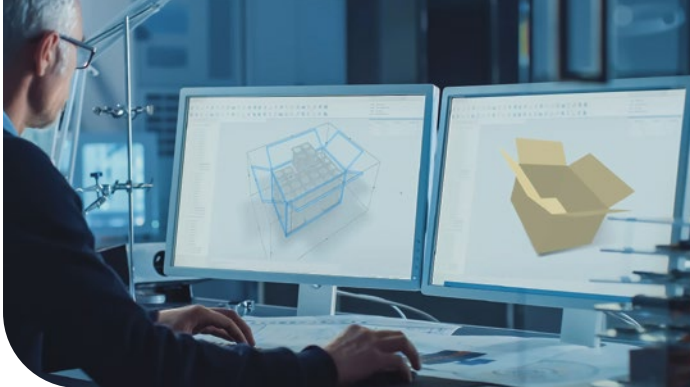

Warehouse **Just in Time.**

Becoming an IEMME customer brings exclusive benefits. Just in time is the perfect solution to optimize the costs and space of every company. When adopting multiple types of packaging and in large quantities, the customer does not always have enough space in place to store the packaging.
